WHY CHOOSE GARLAND CONVECTION? *It's the Secret to a Better Bake!*

North American Made:

Manufactured with the quality and durability you've come to trust from Garland.

Higher Capacity Oven:

The **24" high cooking chamber** is 4" taller than other convection ovens on the market, which gives room for one more rack, increasing your output by 20% without increasing your time. It features a 13-position rack guide, with 6 cooking racks to accommodate virtually any pan size.

Simple to Service:

Front access to the control panel provides easy access to service all electrical components.

Effortless to Operate:

Available with Master 200 Solid-State analog controls or Garland's digital easyTouch® controls with intuitive press-and-go interface.

Smooth Door Closure:

Patented "Safety Door System" **60/40 dependent doors** with windows on both sides are easy to open and close with one hand. Our stainless steel doors feature a positive seal gasket that won't wear out and a full-length welded hinge rod, supported by two rigidity strips, that stands up to the most rigorous use. Plus, you get the added protection of a **5-year Door Warranty** (excluding glass windows).

More Power:

Gas ovens are rated at **60,000 BTU standard** with the option of upgrading to 80,000 BTU at no extra charge. A powerful .6 horsepower, 2-speed convection motor drives the unique serpentine airflow for faster heating and recovery.

Easy to Clean:

The smooth, porcelain interior features seamless covered corners for easy cleaning and enhanced airflow.

Even Cooking Results:

Our innovative air baffling system maximizes airflow by directing heat and evenly channeling it through the entire oven cavity. You get more precise and even cooking results throughout the entire cavity than previously thought possible with other brands. No need to turn your pans halfway through the cook cycle.
